Hooligan (hū'ligān). [Origin unascertained.]

The word first appears in print in daily newspaper police court reports in the summer of 1898. Several accounts of the rise of the word, purporting to be based on first-hand evidence, attribute it to a misunderstanding or perversion of *Hooley* or *Hooley's gang*, but no positive confirmation of this has been discovered. The name *Hooligan* figured in a music-hall song of the eighteen-nineties, which described the doings of a rowdy Irish family, and a comic Irish character of the name appeared in a series of adventures in *Funny Folks*.

A young street rough, a member of a street gang. Also *attrib.*, and *transf.*

These derivatives, with the exception of *hooliganism*, are only occasional, but they are inserted here because of their additional testimony to the currency of *hooligan*.

1898 *Pall Mall Gaz.* 19 Aug. 9/3 Any unauthorized person found trespassing on the aforesaid sphere would be *Hooliganed without further notice. 1899 *Ibid.* 5 Jan. 2/3 The proprietor of Lord Tennyson (in wax) says that it was a certain young man, who, with others... when called upon to desist, Hooliganed about and threw the late Laureate's head at him. *Ibid.* 1 Feb. 2/3 Larking about in the usual *hooliganesque way. 1902 *Daily Chron.* 20 Sept. 5/6 Stay then your *Hooliganic lark. 1898 *Daily Tel.* 12 Aug. 5/7 *Hooliganism, or youthful ruffianism. 1893 *Daily Graphic* 22 Aug. 14/2 The avalanche of brutality which, under the name of 'Hooliganism', has cast such a dire slur on the social records of South London. 1900 *1900 Cent.* July 90 To strike at the very roots of truancy, juvenile crime, and Hooliganism. 1911 *Catholic Times* 1 Sept. Ion. Substitute: Either of the products (see ANION, CATION) which appear at the respective poles when a substance is subjected to electrolysis; hence, any of the electrically charged particles which are released by dissociation in an electrolyte; a molecule or atom considered electrically; a gaseous particle electrically charged by the action of Röntgen or other rays, etc. Also *attrib.*

1833 FARADAY in *Phil. Trans.* (1834) CXXIV. 79 Finally, I require a term to express those bodies which can pass to the electrodes, or, as they are usually called, the poles... I propose to distinguish these bodies by calling those *anions* which go to the *anode* of the decomposing body; and those passing to the *cathode*, *cations*; and when I have occasion to speak of these together, I shall call them *ions*. 1902 Sir J. J. THOMSON in *En cycl. Brit.* XXVIII. 261 We thus regard the conductivity of the gas as due to the presence of electrified particles... These particles we shall call *ions*, but they must not be assumed to be the same as the ions in the electrolysis of solutions. 1924 tr. W. NERNST's *Theoretical Chem.* (ed. 2) 394 If the velocity of the electron is very great, it may produce a relatively large number of positive and negative gas ions. 1909 J. W. JENKINSON *Exper. Embryol.* 136 A physiologically balanced solution is necessary, one in which the electrolytes are in a state of chemical equilibrium with the necessary ion-protein compounds in the tissues. 1927 *Singwick Electronic The. Valency* 91 In a crystal like calcium carbonate we find the same kind of relation between the calcium ion and the CO_3 ion, but a different one for the constituent atoms of the CO_3 group itself... and this may be taken as evidence that the calcium and the CO_3 are themselves ions.

-ion, suffix ², the word ION added to the abbreviated Latin forms of the names of elements and radicals to describe them in their dissociated ionized state, as *cuprion, sulphidion*, after ANION, CATION.

1907 B. B. BOLTHOUD in *Amer. Jrnl. Sci.* Ser. IV. XXIV. 372 The name 'Ionium' is proposed for this new substance, a name derived from the word 'ion'. This name is believed to be appropriate because of the ionizing action which it possesses in common with the other elements which emit α -radiations. 1912 *Soddy Matter & Energy* ix. 220 It is known that the change of uranium into radium is not direct, but that an intermediate substance, ionium, which does produce radium steadily with the lapse of time, intervenes.
